Plano OB/Gyn

A MORE COMPLETE CERVICAL SCREENING

Our Practice offers a cervical screening exam called **PapSure**, in addition to the traditional pap smear test that greatly increases the findings of abnormalities of the cervix, including cervical cancer.

What is PapSure?

It is an exam where the cervix is washed with a mild solution and then the doctor visually examines your cervix with a special light.

FACTS:

1. PapSure test takes just a few additional minutes.
2. PapSure increases the detection of abnormalities of the cervix, including cervical cancer. PapSure does not take the place of the traditional pap smear.
3. PapSure aids in early detection of abnormal cervical cells, which means early treatment.
4. PapSure is still recommended even if you have had a hysterectomy.

PapSure is **NOT covered** by insurance companies. There will be a charge of **\$48.00** due at the time of your appointment if you decide to have the exam as part of your routine checkup.

Please indicate your choice below.

_____ Yes, I want the PapSure exam.

_____ No, I decline the PapSure exam.
